

Steer Organizational Performance at Scale

KYP.ai uses deep data mining tools to continuously capture unseen data that shows how work was completed and how to improve it at scale.

Executive Needs Are Different

Leadership Concierge from KYP.ai is the first Generative AI (Gen AI) that uses a Large Language Model (LLM) designed specifically for executives. Enterprise leaders can engage in conversational, self-service AI to interact with their data and get instant answers to operational questions. This rapid data discovery AI helps executives quickly transition from data capture to clarity within minutes.

Leadership LLM, in contrast to traditional models, is not confined to existing data. It has the unique ability to collect, structure, and display primary and secondary data into a single digital twin database. This adaptability allows it to seamlessly integrate with the KYP.ai product suite or third-party applications, significantly boosting productivity while leveraging your implicit knowledge.

At a Glance

Productivity 360 KYP.ai helps organizations understand, adapt, and improve productivity through end-to-end visibility and potential identification of how people, processes, and technologies perform best together.

How is Leadership Concierge Unique?

KYP.ai gathers and organizes data from various areas of enterprise businesses, creating a holistic digital picture of your organizational data. Leadership LLM surpasses traditional models by consolidating, aggregating, and presenting primary and secondary data in a unified digital twin database for use in KYP.ai or third-party systems.

Designed for Leaders, Engineered for Business Outcomes

Productivity 360 from KYP.ai continuously captures and organizes operational data. KYP.ai Concierge then aggregates this data with other enterprise data sources into a digital twin repository of your organization. Conversational, self-service AI, increases enterprise leader efficiency with on-demand intelligence to understand operational challenges and provides options to solve them.

Description

KYP.ai Concierge is a unique, interactive AI that builds an operational intelligence hub for on-demand data-driven answers. Data is continuously aggregated from multiple sources into its LLM for up to date data inquiries.

It enables organizations to see, understand, and improve productivity by an average of 30% by interrelating how people, processes, and technologies can best work together.

KYP.ai's Leadership Concierge enables you to gather data that is typically not captured by traditional task, process, or people mining software. This platform allows you to collect, transform, and track the results of your digital transformation efforts in one place. Unlike traditional Large Language Models (LLMs) that rely on existing secondary or tertiary sources over time, Productivity 360 captures and suggest improvements by examining and then building recommendations from pattern recognition on how people, processes, and technologies interact.

How It Works

Leadership LLM learns meaning and context by analyzing relationships in sequential data. Data is collected with KYP.ai's Productivity 360 platform from user and desktop activities and can also be integrated from other sources. It's then available in the KYP.ai Intelligence Center for immediate use through API.

Select the teams to receive productivity potential recommendations.

Uncover optimal workflows through process discovery.

Understand organizational impact and potential

Key Features

Business Case Builder

Mine your operation data to pinpoint—and quantify (by FTE, time savings, cost, etc.)—potential improvements by individual, team, process, or even by the company.

KYP.ai Insights Hub

Live, business intelligence dashboards track and display insights necessary to improve performance. A visual editor provides deep personalization and improves productivity.

KYP.ai Intelligence Center

Secure and centralize your relational databases for greater efficiency so that you focus on what matters most – getting better results.

KYP.Agent

The 'Agent' captures and transfers user, desktop, and web activity to the server for processing.

KYP.ai Configurator

Host configurations and user permissions for the KYP.ai platform. Administrator profiles can edit privacy settings, users, platform preferences, and more.

Additional Product Capabilities

Automated Reporting

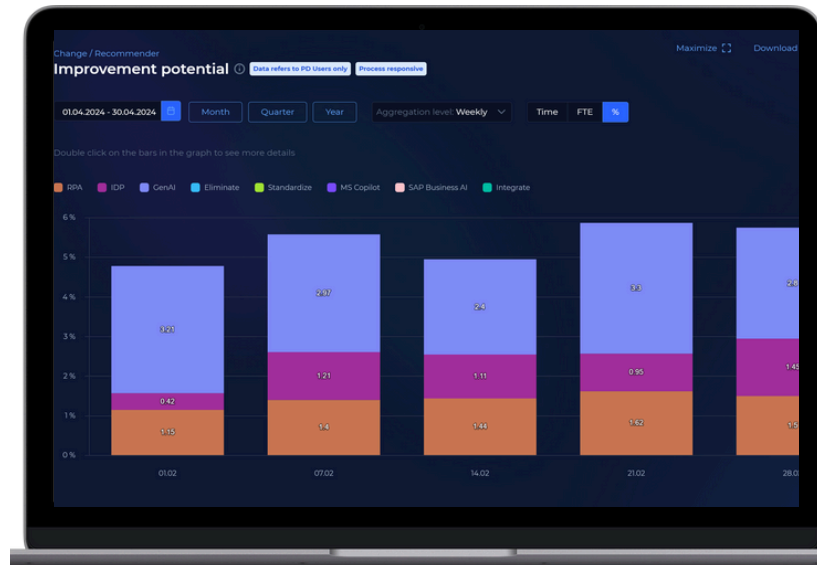

Pre-built and highly customizable reports make it easier to share and scale success. The impact can be viewed in terms of FTEs, time, resources, or cost savings.

24/7 Remote Monitoring

View performance data from anywhere you can access your company's network. Guide operations remotely or on-site, helping you drive a lean, efficient company.

SOC 2 Security Protocol

KYP.ai follows SOC 2 security protocols to ensure that data is protected through pseudonymization, firewalls, and other measures, providing secure asset protection.

KYP.ai identifies improvement potential, considering the benefits of each automation technique.

"It's an incredible source of valuable insights, unveiling untapped potential and helping us and our customers thrive continuously, distilling all the intelligence within this data."

–Agustin Gutiérrez, CTO at Allied Global

KYP.ai Pulse Center

The KYP.ai Pulse Center hosts top-rated dashboards for easy access to the insights that matter most to you.

My Pulse

MyPulse provides personalized insights and actionable AI-based recommendations that enhance your work experience and your productivity.

Organizational Pulse

Steer operations using real-time and historical enterprise data to identify potential improvements in how people, processes, and technologies operate.

Forecasting Pulse

Model the future state to understand potential if-then scenarios for individuals, teams, or organizational performance.

Tech Pulse

Collect technology usage patterns that pinpoint productivity improvements such as technology expansion, reduction, or training gaps to address.

Summary Pulse

A prompt to use with Gen AI to highlight results for an executive summary, meeting prep, continuous improvement reporting, or other snapshot scenarios.

Customer Success

On-demand documentation and a dedicated customer support team are available to support implementation and scale. Choose from a dozen certifications, join our regularly scheduled live training, or browse the KYP.ai user documentation library for 24/7 support.

Use Case

Your CFO has tasked you with finding a more efficient way to process invoices to reduce your team's operating costs.

KYP.ai captures the current invoice processing process across all team members, and Leadership Concierge identifies specific steps, including the cost and expected savings for each step, that can be implemented to improve performance.

You request Leadership Concierge to create a business case for you to present to your CFO. Your leadership and teams provide excellent feedback on a job well done.

Results

Total Expected Annual Savings: \$156,875 are discovered through different types of AI and automation such as Automation for Repetitive Tasks.

Current Cost: Manual handling of 'Open and edit batch' tasks results in ~24 hours and 28 minutes of labor.

Proposed Solution: Use Robotic Process Automation to automate repetitive data entry and processing tasks.

Expected Savings: Up to 30% reduction in labor time, equating to approximately 7 hours and 20 minutes saved.

Cost-Benefit: Assuming an average hourly wage of \$30, the total savings would amount to \$220 daily. Annual savings (considering 250 working days) would be \$55,000.

Steps

Scope and Identification

Select the processes, technologies, and teams for your scope. Set benchmark data, such as active and passive time, and pick which applications to capture.

Install KYP Alagents

KYP Alagents are easy to install with minimal disruption. Within days of installation, you will have access to streams of data on your teams, processes, and technologies.

View Improvement Insights

Continuous insights are readily available in KYP.ai's Productivity 360 platform, such as areas with automation opportunities, processes that can be streamlined, and optimal training and resourcing for teams.

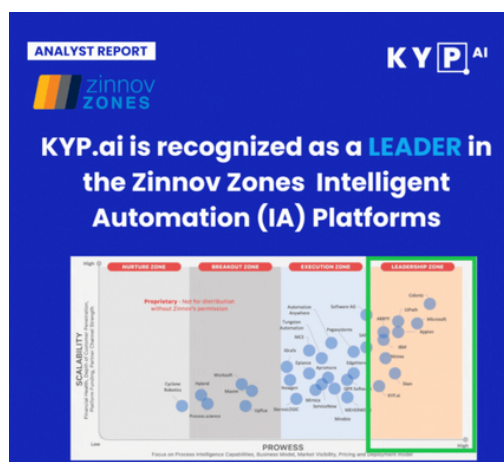

Track Achievements and Savings

KYP.ai offers pre-built reporting and ROI tracking. This allows you to quickly quantify business cases and capture the savings achieved through implementations.

Expand Use Cases

Add additional teams and scope into the KYP.ai platform to continue to achieve more savings.

Benefits

KYP.ai is the only software company in the world that offers a leadership large language model specifically built for today's executives. Bring the power of Gen AI to your daily challenges for success today and in the future.

Save Time and Resources

Conversational AI helps you get answers to your business questions using your own data, which increases efficiency and saves time.

On-demand Intelligence

Use Leadership Concierge to better plan your day or to develop your long-term strategy. It's an assistant and data scientist in a single powerful platform.

Solve Challenges

Solve your most challenging leadership issues by leveraging your organizational intelligence data integrated with AI technology.

Boost Your Success

Empower company leaders with top-shelf AI so that executives can uncover and solve complex issues and business objectives.

Increase Productivity

Boost productivity with AI advancements that enhance the efficiency of people, technology, and processes.

Instant and Residual ROI

Value and residual ROI are continuously tracked and quantified. Ongoing insights can advance your continuous improvement strategy.

Improve Margins

Improve profit margins with AI-generated recommendations that identify the most effective use of full-time equivalents, optimize resources, and implement other improvements.

Increase Employee Satisfaction

Better work allocation and fewer routine tasks helps employees feel more connected to work, performance, and to their colleagues.

About KYP.ai

SEE. UNDERSTAND. CHANGE.

KYP.ai helps organizations capture productivity intelligence to improve how work gets done. Continuous data structuring allows users to understand, adapt, and reach peak organizational productivity. Dashboards highlight specific actions that enhance company profitability across people, processes, and technologies.

GET STARTED

Operational Visibility

React quickly to potential issues and capitalize on optimization.

Manage Productivity

View and replicate optimal productivity across different work environments.

Leaner Operations

Identify the impact of different approaches, with data to guide decisions.

Continuous Improvement

Identify automation opportunities and projects for significant times savings.
